

FOOD SAFETY POLICY

An integrated food safety system that is governed by the BRC international standard is a part of our quality assurance system. Packaging materials for food products constitute a large part of our portfolio, and therefore quality is the basic pillar of all our processes.

- Each product that we produce and deliver to customers complies with the BRC regulations and with the applicable food industry requirements.
- We observe all applicable hygienic standards throughout our production processes and other activities in order to meet the highest customer requirements.
- We exclusively use materials in the manufacturing of our products (base materials, inks and glues) that are not harmful to health.
- We demand our suppliers and partners to meet stringent quality requirements, because otherwise we would not be able to provide the service levels expected from us. Regular audits and inspections at our suppliers are part of our daily operations.
- We constantly check and monitor the condition of our machinery and devices to avoid possible quality problems or contaminations due to poor hygiene.
- Based on the BRC requirements, we have determined and monitor the Critical Control Points that allow us to prevent or eliminate potential food safety hazards.
- Our products are always manufactured to specifications that are approved or predetermined by our customers. Owing to the proper documentation of our work processes, traceability is fully ensured. A certificate of the applicable laboratory tests (CoA) accompanies every product delivered to our customers.
- In order to grow and develop our business, we periodically conduct internal and external audits to review our systems and processes.
- We provide regular updates and organise training courses to make sure that all employees are aware of the applicable food safety regulations and apply them responsibly throughout their daily work.
