

ENVIRONMENTAL POLICY

One of the most important aspects of environmental protection is the development and protection of a viable and sustainable environment. As part of our corporate social responsibility efforts, we must strive to create a balance between the realization of our business plans and the protection of the environment.

- Our processes are based on the ISO 14001 environmental management system and on the applicable legal requirements.
- Our goal is to use eco-friendly technologies to reduce contamination and the environmental load of our operations.
- Prevention is essential. We evaluate and identify hazards and take actions to avoid any environmental damage.
- We try to minimise the quantity of hazardous materials used in our production processes, and ensure the safe storage and disposal of waste and hazardous materials.
- Protecting the environment is a prime responsibility of every employee. We educate our staff about the applicable legal requirements and our environmental policy and refresh their knowledge in regular training sessions.
- We place great emphasis on sustainable development that “meets the needs of the present without compromising the ability of future generations to meet their own needs.” We encourage our customers to use eco-friendly packaging materials and solutions that can reduce their ecological footprint.
- We regularly review our systems and processes in external and internal audits.
